nr1 topic
Health:
Focused on improving the health and well-being of Europeans through research and innovation in prevention, diagnosis, treatment, and care.
Topics include cancer, infectious diseases, personalized medicine, healthy aging, and digital health.
Culture, Creativity, and Inclusive Society:
Aimed at strengthening the cultural and creative sector and promoting inclusive and resilient societies.
Topics include cultural heritage, cultural and creative industries, social innovation, democracy, education, and migration.
Civil Security:
Focused on enhancing safety and protecting citizens from threats such as terrorism, crime, cyberattacks, and natural disasters.
Topics include border management, disaster response, cybersecurity, data protection, and forensic research.
Digital, Industry, and Space:
Aimed at driving the digital transformation of industry and strengthening Europe's position in space.
Topics include artificial intelligence, robotics, 5G, cloud computing, the Internet of Things, space technology, and Earth observation.
Climate, Energy, and Mobility:
Focused on addressing climate change, promoting clean energy, and developing sustainable mobility.
Topics include renewable energy, energy efficiency, CO2 reduction, smart cities, electric transport, and sustainable aviation.
Food, Bioeconomy, Natural Resources, Agriculture, and Environment:
Aimed at ensuring food security, promoting a sustainable bioeconomy, and protecting the environment and natural resources.
Topics include sustainable agriculture, biodiversity, circular economy, water management, soil health, and climate-resilient agriculture.
TRL 1: Basic principles observed and reported.
TRL 2: Technology concept formulated.
TRL 3: Analytical and experimental proof of concept.
TRL 4: Laboratory validation of component and/or breadboard.
TRL 5: Component and/or breadboard validation in relevant environment.
TRL 6: System/subsystem model or prototype demonstration in relevant environment.
TRL 7: System prototype demonstration in operational environment.
TRL 8: System complete and qualified.
TRL 9: System proven in operational environment (competitive production).

Research and Innovation Actions (RIA) :
These projects focus on developing new knowledge and technologies, from fundamental research to demonstration in a relevant environment. RIAs are typically in the earlier stages of development (TRL 3-7) and aim to demonstrate the technical feasibility of a concept.
Innovation Actions (IA):
IAs are projects aimed at further developing and scaling up innovative solutions, bringing them closer to the market. They may include activities such as prototyping, testing, demonstration, and market introduction. IAs usually have a higher TRL (6-8) than RIAs.
Coordination and Support Actions (CSA):
CSAs are projects that carry out supporting activities such as networking, coordination, knowledge dissemination, standardization, and policy development. They contribute to creating a favorable environment for research and innovation.
ERC Grants:
These are grants for individual researchers or small teams to conduct groundbreaking research based on scientific excellence. ERC Grants come in various categories depending on the researcher's career stage (Starting, Consolidator, Advanced).
Marie Skłodowska-Curie Actions (MSCA):
MSCAs are grants for developing research talent and promoting international mobility of researchers. They offer opportunities for training, networking, and career development.
FET Flagships:
Large-scale, long-term research projects aimed at ambitious scientific and technological goals.
EIC Pathfinder:
Projects focused on radically new technologies with high risk and high potential.
EIC Transition:
Projects aimed at bridging the gap between research and market for promising technologies.
EIC Accelerator:
Grants and blended finance (grant and equity) for innovative scale-ups with international ambitions.
SME, NGO, Big, institution etc.
